1. Introduction

The Issues Reporting Outlet (IRO) is a web-based application developed to provide AAUA students and indigenes of Akungba, Iwaro, Etioro, Ayegunle, and surrounding communities with an easy and centralized platform for reporting issues affecting their environment.

The system enables users to register, log in, submit complaints, upload supporting images, and monitor the progress of their reports. Administrators are responsible for reviewing reports, updating their status, and managing submitted complaints.

2. Purpose

The purpose of the IRO system is to:

- Provide a centralized issue-reporting platform.
- Improve communication between students, indigenes, and administrators.
- Reduce delays associated with manual complaint reporting.
- Provide transparency by allowing users to track the status of their complaints.

3. Scope

The system provides the following services:

- User registration
- User login
- Issue reporting
- Image upload
- Report status tracking

- Report management by administrators

The current version is a simple front-end prototype developed using HTML and CSS without a backend database.

4. System Users

User	Description	Responsibilities
Student	AAUA Student	Register, login, report issues, view report status
Indigene	Member of Akungba, Iwaro, Etioro or Ayegunle communities	Register, login, report community issues, view report status.
Administrator	System Manager	Login, manage reports, update report status, delete reports

5. Major Components of the System

5.1 Home Page (index.html)

Description

The Home Page is the entry point into the application.

Functions

- Display system information.
- Navigate to Register page.
- Navigate to Login page.

- Navigate to Report Issue page.

5.2 Registration Module (register.html)

Description

This module allows new users to create an account.

- Inputs
- Full Name
- Email
- Phone Number
- Community
- User Type
- Password

Output

Successful registration message.

5.3 Login Module (login.html)

Description

Allows registered users to access the system.

- Inputs
- Email
- Password

Output

Access to user dashboard.

5.4 Report Issue Module (report.html)

Description

This module allows users to report issues affecting the university or surrounding communities.

Inputs

- Issue Title
- Category
- Description
- Community
- Upload Image

Output

Complaint submitted successfully.

5.5 Dashboard Module (dashboard.html)

Description

Displays all reported issues.

Information Displayed

- Report ID
- Issue
- Community
- Status
- Date

5.6 CSS Module (style.css)

Description

Provides styling for all web pages.

Responsibilities

- Consistent layout
- Responsive design
- Buttons
- Forms
- Navigation links

6. System Interaction

The interaction among the components of the system is illustrated below.

System Interaction of IRO webpage

Interaction Explanation

1. The user visits the Home Page.
2. The user registers if they are a new user.
3. Existing users log into the system.
4. After logging in, the user accesses the Report Issue page.
5. The user fills in the complaint form and submits the report.
6. The submitted report is displayed on the Dashboard.
7. The Administrator reviews the report.
8. The Administrator updates or deletes reports when necessary.
9. Users can revisit the Dashboard to monitor the status of their reports.

7. Functional Requirements

The functional requirements describe what the system must do.

ID	Functional Requirement
FR1	The system shall allow users to register.
FR2	The system shall allow registered users to log in.
FR3	The system shall allow users to report issues.
FR4	The system shall allow users to upload images as evidence.
FR5	The system shall allow users to select their community.

FR6	The system shall display submitted reports.
FR7	The administrator shall manage reports.
FR8	The administrator shall update report status.
FR9	The administrator shall delete invalid reports.
FR10	The system shall display the status of reported issues.

8. Non-Functional Requirements

These describe how the system should perform.

Performance

- Pages should load quickly.
- Report submission should take only a few seconds.

Security

- Password fields should be hidden.
- Only administrators should manage reports.

Reliability

- Reports should not be lost after submission.
- The application should be stable during use.

Availability

The system should be accessible whenever users need it.

Usability

- The interface should be simple and easy to use.

- Navigation between pages should be straightforward.

Compatibility

The application should work on:

- Desktop computers
- Laptops
- Tablets
- Mobile phones
- Maintainability

The code should be simple and organized so that future improvements can be made easily.

9. Assumptions and Limitations

Assumptions

- Users have internet access.
- Users provide correct information during registration.
- Administrators regularly monitor submitted reports.

Limitations

- This prototype is developed using only HTML and CSS.
- No database is connected.
- No real authentication is implemented.
- Report status is displayed as sample data.

10. Conclusion

The IRO (Issues Reporting Outlet) system provides a simple and user-friendly platform for reporting issues affecting AAUA students and host communities. The prototype demonstrates the complete workflow of registration, login,

issue reporting, and report monitoring through an intuitive web interface. Future versions can be enhanced by integrating a database, real-time notifications, authentication, and automated report tracking.
